

COM S 127 - Assignment #1 Grading Rubric

Please see the 'Course Schedule' on the Syllabus for this assignment's due date.

Assignment Objective

The objective of the assignment is for students to practice printing text strings, gathering input from the user with the `input()` function, and concatenating strings and input together.

Instructions

Students should study the file(s) provided, and notice the various 'TODO' comments contained therein. These comments indicate places in the file that students should modify the code to be their own. These 'TODO' comments are the places in the script where code/ student work will be evaluated for the final grade on the assignment.

Students' work should be their own, completely original effort, and should reflect a degree of industriousness that goes beyond 'copying and pasting' the instructor's example code three additional times. Simply changing the instructor's code ever so slightly is insufficient, either in the 'input gathering' phase, or the final print-out phase. While this is a subjective decision to a certain degree, the best way to avoid any problems is to make three completely original 'Zany Texts.' **As such, this assignment, as simple as it is, may, in fact, take more than 'three seconds' to complete.**

NOTE: If you use commas inside your print statements, (ex: `print("Hello", "there!")`) you may get undesired spaces in your final printouts. Do not worry about these for now - they will not affect your grade. However, if you like, you can try experimenting with the `+` operator for string concatenation (ex: `print("Hello" + " " + "there!")`). Try to see how this works with the variables you assign the text to from the `input()` function.

Files Provided

`zanyText.py`

Example Output

`Zany Text!`

`By: Matthew Holman
[COM S 127 A]`

`Zany Text #1`

`noun: cat
adjective: silly
adjective: happy
adjective: blue
past tense verb: ran
noun: house`

`Once upon a time, there was a cat. It was a silly, happy, blue cat. And, one day it ran all over the house!`

`etc.`

Special Notes

NOTE: This assignment should not be terribly difficult. However:

- Completing this assignment may require the student to start their work 'before the last minute.' Please plan accordingly.
- The student's script **CANNOT** crash under any circumstances. Any portions of the student's code where the script crashes will receive a zero (0) for that aspect of the script.

NOTE: The student is turning in their CODE - NOT the OUTPUT of their code.

- The student's code will be run by the TAs, and the output of those runs, along with the code itself, is what will be evaluated.

NOTE: Assignments turned in in any other format other the specified file types will not be accepted.

- Screenshots of code **will not** be accepted.
- .sln files are **not** code files - they contain **no** Python code and **will not** be accepted.
- .zip, .rar, .tar.gz, and other compressed files **will not** be accepted unless otherwise specified.
- If a student's submission is not in a .py file, when so specified, and if the submission is not accompanied by **all** the files needed to run the submission, the submission will not be graded.
 - **THIS WILL LEAD TO THE STUDENT RECEIVING A ZERO (0) ON THE ASSIGNMENT.**
 - **Students will *NOT* be allowed to re-submit their work after the final deadline in this case.**

NOTE: Some students have reported that submitting an assignment on Canvas may have difficulties associated with it.

- Submitting the assignment on Canvas may result in a 'spinning blue circle' on the submission page. This is the normal/ expected behavior.
- Students should submit their work via the GUI built into canvas - not by attempting to access the Canvas API. Doing so may cause problems.
- So long as the top of the page reads 'Submitted' in green text, there should not be a problem.
- The student can confirm the status of their submission by downloading it themselves after they submit it. This is **highly** recommended.
- Students may appear to encounter difficulties in submitting their assignment due to issues with the Canvas platform itself. However, this will **not** be an excuse to turn in work past the deadline.
 - **THIS MEANS THAT STUDENTS SHOULD NOT WAIT UNTIL THE 'LAST MINUTE' TO ATTEMPT TO SUBMIT THEIR ASSIGNMENT TO CANVAS. THUS, STUDENTS WILL NEED TO 'PLAN THEIR LIVES' IN REGARD TO THEIR TIMELY SUBMISSION.**
 - **STUDENTS SHOULD ATTEMPT TO SUBMIT THEIR WORK *BEFORE* THE FINAL DEADLINE.**
 - **IF STUDENTS ENCOUNTER PROBLEMS SUBMITTING THEIR ASSIGNMENTS, PERHAPS TRY A DIFFERENT BROWSER, CLEAR THE BROWSER CACHE, ETC.**
 - **IF STUDENTS NEED HELP TURNING IN THEIR ASSIGNMENTS, THEY ARE ALWAYS WELCOME AT INSTRUCTOR/ TA OFFICE HOURS.**
 - **MANY ASSIGNMENTS HAVE BEEN SUBMITTED IN THE PAST, THUS IT *IS*, INDEED, POSSIBLE TO DO.**

Grading Items

- **(Due Date)** Was the assignment turned in by the 11:59 p.m. 'due date' and was the file named `zanyText.py`?: _____ / 1
- **(Name at Top)** Has the student typed in their name/ date at the top of the `zanyText.py` file and deleted this 'TODO' comment?: _____ / 1
- **(Assignment #/ Description)** Did the student write the assignment number and a brief description of what the assignment is inside the initial comment block, and then delete this 'TODO' comment?: _____ / 1
- **(Name/ Section Number)** Has the student added their name/ section number to the initial script output?: _____ / 1
- **(Zany Text 2)** Has the student added a second 'Zany Text'?: _____ / 2
- **(Zany Text 3)** Has the student added a third 'Zany Text'?: _____ / 2
- **(Zany Text 4)** Has the student added a fourth 'Zany Text'?: _____ / 2

TOTAL _____ / 10
